

# Political Polarization and Public Opinion in 2016 US Presidential Election

Chen, Yi-Wen

NTU Economics

January 23, 2019

# Outline

- 1 Introduction
- 2 Data
  - Facebook
  - Hate Crime
- 3 Empirical Analysis
  - Research Ideas
  - Data Exploration
- 4 Current Progress
  - Post Selection
  - Analysis of Trump and Clinton's Fans
  - Hate Crime

# Motivation

- Issues related to immigration, gender and race are considered controversial, and few politicians have made these central issues in campaign.
- The one who broke the line: Donald Trump
- Extreme opinion toward related issues and hatred between Republicans and Democrats increases through the campaign.
- From Taiwan to the United States: China issue v.s. Untraditional issues

# Research Question

- Did Trump's statements toward related issues induce political polarization?
  - The issues may be the main social cleavage of the US society.
- How did public opinion on social media change in the election?
  - Politician and media coverage of related issues can shape public attitudes, especially negative ones.

# Facebook Data

- 2015-05 ~ 2017-04 facebook data.
- Data includes all US politicians and top 1000 pages that mentioned Trump and Clinton.
- Post level, comment level, user level.
- Advantage: Large, Panel data
- Disadvantage: Lack of social economic variables, containing unstructured data(text data).

Figure 3: Comment Data

# Hate Crime Data

- 2015 ~ 2017 Hate Crime data from FBI.(Requesting for data from 2006 to 2014)
- Incident reporting data, including:
  - Agency information: state, city, population group, current population, country division, country region, etc.
  - Incident information: date, location, motivation, victim type, offenders' race, offense type, etc.

# Some Research Ideas

- Comparing public opinion before and after Trump's statement toward related issues  $\Rightarrow$  Event Study
- Finding who manipulated public opinion on social media  $\Rightarrow$  Fake news, pages standing in extreme position
- How long did the hate speech/polarization last?
- Who is attracted by Trump?
- Associating with real world: Does hate crime increases during the election?

# Event Study

- Immigration

- 2015/06/16 Launches campaign, referring to Mexicans as rapists and criminals.
- 2015/12/07 Calls for a Muslim ban.
- 2016/08/31 Immigration speech

- Race (Focus on black and white)

- 2015/11/23 Tweets false statistics about African-American.
- 2016/02/25 David Duke supports Trump.
- 2016/06/11 Misleading claim on black unemployment.

- Gender

- 2015/08/06 Get tough with Megyn Kelly
- 2016/03/30 Claim that women should be punished for abortions
- 2016/10/07 A 2005 Access Hollywood tape of Donald Trump speaking with Billy Bush about women on a bus was leaked.

# Data Exploration

- Select related posts a month before and after the events.
- Comment analysis
  - Extract the sentiment of comments along with noun counts, comparing comment's attitude toward related issues before and after the event.
  - Word count.
- User analysis:
  - Compare the mean ideology difference between Trump and Clinton's supporters before and after the event.
  - Compare the users reacting with the related posts before and afterward.
- Other analysis:
  - Which pages kept manipulating public opinion toward these issues?

# Data Exploration

- Track the mean ideology difference after the election.
- Explore Trump's new supporters.
- Fake news issues: Compare with mainstream medias.

# Post Selection

- Using keyword combination to extract related posts.
- Variables included: post name, post message, post description, post picture, post link.
- Still trying/looking for other methods for improvement (word2vec,...)

# Immigration Event 1, 3

- Event1: 2015/06/16 Launches campaign, referring to Mexicans as rapists and criminals.
- Event3: 2016/08/31 Immigration speech
- Posts containing "immigration" or "immigrants".
- Posts containing "mexico" or "mexicans", also containing:
  - Trump
  - rapist or criminal

```

post_content = post_data["post_name"][i] + post_data["post_message"][i] + post_data["post_description"][i] + post_data
["post_picture"][i] + post_data["post_link"][i]
post = post_content.lower()
if post.find("immigration") != -1 or post.find("immigrant") != -1 or post.find("immigrants") != -1:
    immigration_index.extend([i])
elif post.find("mexico") != -1 or post.find("mexicans") != -1 or post.find("mexican") != -1:
    if post.find("trump") != -1:
        immigration_index.extend([i])
    elif post.find("rapist") != -1 or post.find("rapists") != -1 or post.find("criminal") != -1 or post.find
("criminals") != -1:
        immigration_index.extend([i])

```

# Immigration Event 2

- Event: 2015/12/07 Calls for a Muslim ban.
- Posts containing "immigration" or "immigrants".
- Posts containing "muslim", also containing:
  - Trump
  - ban

## Gender Event 2

- Event: 2016/03/30 Claim that women should be punished for abortions
- Posts containing "abortion"
- Posts containing "pro-life" or "pro-choice", also containing:
  - Trump

# Analysis of Trump and Clinton's Fans

- Select Trump and Clinton's new fans every week.
- Select Trump and Clinton's fans every week.
- Calculate the proportion of extreme fans:
  - The absolute value of ideology score  $> 1$
  - Users out of 2 standars deviation

# Users' Ideology Trend

Figure 4: Mean

Figure 5: Standard Deviation

# Trump and Clinton's Extreme Fans ( $|\text{ideology}| > 1$ )

Figure 6: Fans

Figure 7: New Fans

# Trump and Clinton's Extreme Fans (Out of 2 std)

Figure 8: Fans

Figure 9: New Fans

# Hate Crime

- Combine hate crime data and user ideology data.
  - Total of extreme right-wing users
  - Total of extreme users
  - Standard deviation
  - Mean difference
- Still working on data exploration
  - Other social-economic variable: population, city size
  - Different type of motivation and offenders.
